

Employee Payroll System (SQL)

This project is a simple Employee Payroll System developed using MySQL. It allows organizations to manage employee details, track attendance, calculate salaries, and generate payroll reports. The system is designed to handle:

Employee Management: Adding and managing employee details.

Attendance Tracking: Recording the number of days worked per employee.

Salary Calculation: Calculating employee salaries with allowances, deductions, and generating gross and net salary.

Payroll Generation: Generating monthly payrolls for employees with salary details.

Key Features:

Employee Data: Stores employee name, department, and email.

Attendance: Tracks work days for each employee per month.

Salary: Handles basic salary, allowances (HRA, DA), and deductions (e.g., taxes).

Payroll: Generates a report for the monthly payroll with gross and net salary.

Tech Stack:

MySQL for database management and queries

SQL queries for managing employees, attendance, salary, and payroll systems.
